Etikettmall

En etikett mall är en fil designad i NiceLabel Designer och uppladdad till Grafokett online. Är etikettmallen lagrad anses den vara en etikettmall, oavsett om den är aktiv och används eller om den blivit inaktiverad och inte används.

x

Vad är en skrivarmodell?

En skrivarmodell är en skrivare som är tillagd i Grafokett Online och finns tillgänglig för användare att skriva ut genom.

Ex. Zebra ZD420 är en skrivarmodell, Zebra ZD620 är ytterligare en skrivarmodell. Du kan alltså använda endast modellen ZD420 och endast använda en skrivarmodell i ditt konto, om du sedan har 20 st skrivare tilldelade olika Ip-adresser, grupper eller till olika etiketter spelar alltså ingen roll.

Close

x

Vad är en utskriftsvy?

Med utskriftsvy menar vi på vilket sätt användarna kommer åt att skapa sina utskriftsjobb av de etiketter du gör tillgängliga för dem.

- MyArticles - Här utgår användaren från en eller flera artiklar som lagrats i Grafokett Online, sök på artikelnamn och skriv ut alla etiketter anslutna till artikeln.
- MyOrders - Här utgår användaren från en eller flera order som lagrats i Grafokett Online, sök på ordernamn och skriv ut alla artiklar anslutna till

ordern med samtliga etiketter anslutna till ordern.

- MyLabels - Här utgår användaren från de etiketter som lagrats i Grafokett Online och tilldelats till användarens grupp, välj etikett för att sedan söka på artikelnamn eller ordernamn och skriv sedan ut etiketten baserat på valet.

Close

x

Vad är Easy print?

Easy print gör att du kan skriva ut etiketter med förinställda data utan att användaren behöver interagera med Grafokett online förutom att klicka på en länk i ditt system.

Länken skapas genom att sammanfoga en URL som pekar på grafokett online med ett etikett-id, ett artikelnamn, en viss del systeminställning och slutligen lägga till parametrar för den faktiska etikettdata.

Exempel:

https://grafokettonline.com/#/print-labels/32/articlename/Product%20available%20for%20testing?article_name=Article%20to%20print&article_number=123333&batch_no=FF3433&grafokettonline.print_quantity=2&grafokettonline.auto_print=true

Exemplet skulle skriva ut en etikett med id "32" för artikeln med namnet "Produkt tillgänglig för testning". Etikettdata skulle vara:

- Artikel nummer med värdet "123333"
- Article namn med värdet "Article to print"
- Batch nummer med värdet "FF3433"

Utskriftskvantiteten är inställd på 2 och etiketten skrivs ut automatiskt.

NOTERA! Om du försöker använda exempellänken hamnar du antagligen på inloggningssidan för Grafokett Online - Fantastiska nyheter! det betyder att allt fungerar som avsett. Du måste ha ett användarkontokonfiguration eftersom du

måste välja standardskrivare och så vidare.

Vad är Quality Assurance?

Funktionen Quality Assurance aktiverar dokumentlagring i molnet för etiketter med versionshantering och en komplett attesteringsmodell som säkerställer att endast godkända ändringar publiceras för att användas skarpt i produktion.

Arbetsflöde:

1. Användare med rollen Label designer checkar ut etiketten för redigering (etiketten är låst)
2. När ändringarna är klara checkas etiketten in och skickas vidare för godkännande
3. Användare med rollen Design Approver & Data Approver blir aviserade via e-post.
4. Ändringarna inspekteras i det kraftfulla verktyget för inspektion där ändringar snabbt identifieras
5. Ändringarna accepteras eller avvisas av användarna
6. När design- & data-innehåll är godkänt aviseras användare med rollen Quality Manager.
7. Användaren inspekterar kommentarer från användarna som designat & godkänt versionen innan hen publicerar.

What our customers are saying

“We save a lot of time on central control and the system facilitates the staff because everything is printed automatically”

Ronny Jensen, Region Europe North Deliver Manager,
Linde Gas AS

“An easy way for us to create SSCC labels without having to think about standards, barcodes or designing labels. We can focus on our core business and selling our products”

Stefan Dempe, Site manager, Hedlundgruppen

“Our product boxes needs to have labels with text & barcodes, our suppliers can access their products with thier own product number to print the correct labels online”

Kim

Byström, Purchase and logistics, Hydroscand AB

FAQ

Frequently asked questions about Cloud label

[How do get started with Cloud label?](#)

You can easily create an account by following the link [GET STARTED FOR FREE](#), selecting a label and entering your company information. Alternatively, you can book a demo with our team, to preview the platform and get help selecting the suitable account level.

[You can also read this section in our docs](#) if you want more information.

[Does Cloud label work on Mac?](#)

Yes, Cloud label works on both Mac and PC.

[What is the difference between the FREE and STARTER account?](#)

With a FREE account, you are limited to 100 PDF prints per month, as well as one user and one label.

With a STARTER account, you can instead create an unlimited number of print jobs, send the print jobs directly to a label printer, and add more labels. You can also have up to ten users in the account.

[Can I add more users?](#)

With STARTER you can increase the number of users up to 5, in STANDARD you can add a maximum of 10 users. If you need more users than that, you get unlimited users in a BUSINESS account.

[What do you mean with a label?](#)

With a label, we mean the number of label templates you need. A label template is a file designed in NiceLabel Designer and uploaded to Cloud label. All stored label

templates count, regardless of whether they are used or inactive in the account..

[What is a print path?](#)

By print path, we mean the way in which users get to create their print jobs, based on the labels made available to them

- **My articles** - The user starts with one or more articles stored in Cloud label, searches for article names, and prints all labels associated with the article.
- **My orders** - The user starts with one or more orders stored in Cloud label, searches for order names, and prints all articles connected to the order with all labels connected to the order.
- **My labels** - The user starts by selecting one of the labels stored in Grafokett Online and assigned to the user's group, select the label and then search for the article name or order name and then print the label based on the selection.

[I have several printers, how many printer models do I need?](#)

A printer model is a printer added to Cloud label, which is available for users to send their print jobs to. For example, the Zebra ZD421 203 dpi is a printer model and the Zebra ZD421 300 dpi is another printer model.

You can use several printers of the same model and resolution, but only use one printer model in your account. So, it doesn't matter if you have one or ten ZD421 203 dpi assigned to different IP addresses, groups, or to different labels, they still count as only one printer model.

[Can I create new labels using my own design?](#)

Absolutely! In all paid accounts, you can upload label templates created in NiceLabel Designer. In addition, if you sign up for STANDARD or BUSINESS, a Designer Pro license is included.

We have all our data in a web-based system (for example webshop or ERP), can I print from there?

Yes, there are two ways to initiate a print job:

1. Create a hyperlink in your system with label, article data, printer and number of copies as parameters and point it to (<https://cloudlabel.com>). Then the user will only have to approve the print job in Cloud label to get the label printed.
2. Your system sends a POST message that contains label, article data, group, and number of copies. Grafokett Agent then takes care of the print job and prints it to the correct printer.

Alternative 1 is included in a STARTER account, while alternative 2 is available as an add-on.

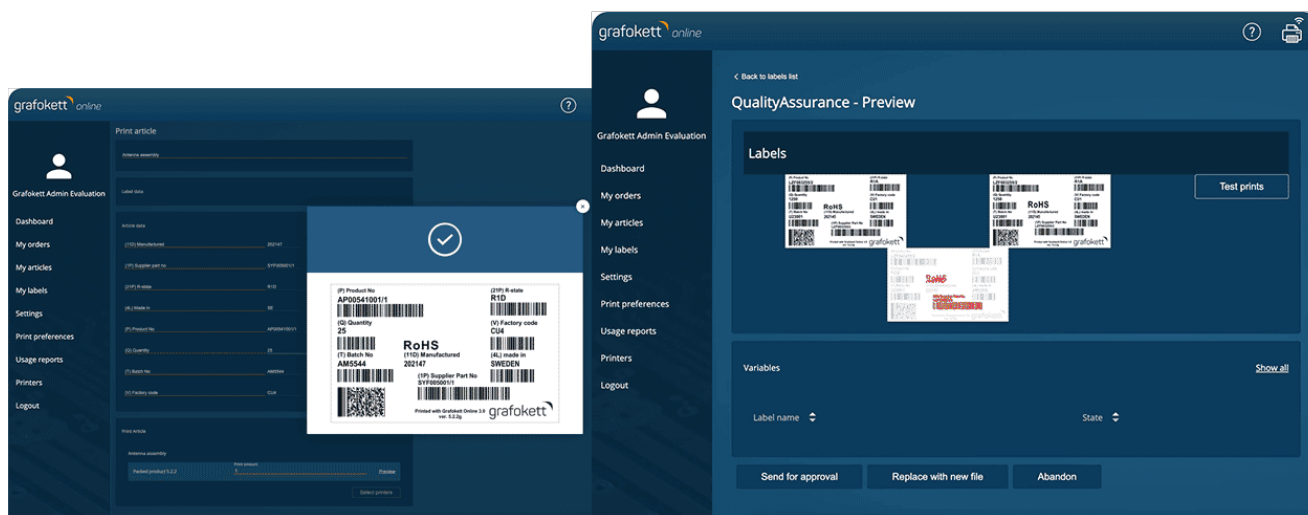

From STANDARD, both alternatives are included.

What ERP systems can Grafokett Online be integrated with?

Grafokett Online can integrate with all ERP systems that can generate some form of outgoing data.

One simple way to create print jobs from an ERP system is to have the system create flat files (txt/csv) that contain the information that should be printed on the label.

Several systems such as Pyramid Business Studio, Visma Business and Microsoft Dynamics, can create these files at the correct time. The files are then processed by Grafokett Agent and printed to the printer of choice.

Create an account

It is easy to start an account and you can get started by yourself. And you can choose to start with our FREE plan.

But if you want to learn more about the label management system and how it would work for your company we are happy to setup a demo session. Then you can talk with one of our systems experts.
