

Towards Industry 4.0 - step into the future

The fourth industrial revolution, Industry 4.0, is currently underway.

Cloud label will help you implement Industry 4.0 with tools making your organization more automated, efficient, and safer.

“All new changes should be focusing on value, not tech”

Everybody wants change, but nobody likes to be changed.

Companies understand the promise of Industry 4.0. It's all about making business more automated, smarter, faster, and more sustainable. The challenge is to make that promise come true.

Everybody wants change, but nobody likes to be changed. It's always a challenge

going from something you are used to into something new. All new changes should be focusing on value, not tech. By implementing small steps towards the digitalized future, you can get your organization and staff on board – the easy way.

Benefits of a cloud-based label management software

As we know, label management is becoming an increasingly big challenge. Large amounts of data, different products, suppliers, information channels, hardware, software, and geographical barriers make it complex. Label cloud solves this with a cloud-based label printing software, with centralized storage of all label data and label design. You can connect your devices to the cloud in a secure and smart way in the azure cloud on the Internet instead of on a local machine, where you have access and can print labels anywhere in the world.

Here are some of the advantages with Cloud label:

- Automated label printing:
 - save time
 - eliminate unnecessary steps and repetitive tasks (such as data input and relabeling)
- Make it easy to print labels:
 - handle your data and label designs easy
 - access for printing anywhere in the world
- Increase quality and reducing errors:
 - eliminate the need to input data several times and automating other actions
 - reduced product labeling errors
 - ensure high quality
- Increased profitability
- Attractive for new employees

Say hello to better label management! Get started for free or [book a demo with us.](#)

Here are the top digital transformation technologies brought about by Industry 4.0:

- Big data & Analytics
- Autonomous robots
- Simulation/digital twins
- Horizontal and vertical systems
- Industrial IoT
- Cybersecurity technology
- The cloud
- Additive manufacturing
- Artificial intelligence
- Augmented reality
