Function:

Expertise:

Specialists with more than twenty-five years of experience.

What does a label come up against in its lifetime? Can security features be built in? How will the label's take washing, cutting and being hit? What is economical and traceable? If the material is environmentally safe? What hardware handles and stores the specific data the best?

Grafokett are experts with more than 25 years of experience. We are brand independent, and have suppliers all over the world. We rationalise and simplify the labelling process for every industry. We know everything there is to know about our materials, adhesives and durability. Above all, we know how to ask the right question and then listen to the answer. Your needs define functionality, and there may be several solutions.

Innovation:

Smart in the right way.

If a customer has demands that a product must meet a specific requirement, such as UL/CSA requirements, then the answer is simple. We immediately know which components are necessary in terms of label material, ribbon and printer. When we combine approved components in the correct application and surface you might think we are finished. But there is still work to do.

The combination of materials must not only match the characteristics of the product, but also what the product can be exposed to during its entire life cycle. The label will live the same life as the product it is attached to, exposed to extreme heat, arctic cold, moisture and water, chemical agents, UV light, mechanical wear or something completely different.

We have methods and modern tools to constantly keep pace with development in technology and the way the world does business. You'd be surprised what opportunities there are today. [Contact us](#) for more information.
